

PRIORITY 5 HOLDINGS' TACCS™ PLATFORM ACCELERATES DEPLOYMENT OF IOT BASED SAFETY AND SECURITY SOLUTIONS

01-21-2019

*TACCS™ brings real-time solutions to everyday problems with its
'Operational Readiness Platform'*

Needham, MA – Jan. 21, 2019 – Priority 5 Holdings, Inc. today announced yet another broad use of their industry leading TACCS™ (Touch Assisted Command and Control) software. As a COTS based operational readiness platform, TACCS™ provides information for decision-makers at all levels enabling them to deal with complex circumstances 24/7. The robust platform allows users to combine critical information received from various and disparate IoT systems, in any operating environment, with information about changes occurring in that environment, (i.e. weather, water flow sensors, traffic, gate access, video or emergency management) allowing for focused real-time decision making.

TACCS™ has become the unifying element, with its patented threat processing (using AI – artificial intelligence) and simulation engine, making it simple for operations' personnel to triage and organize the disparate information, take or recommend the next course of action, and issue mission critical data and insights to key stakeholders and community members in real-time. TACCS™ serves as an acceleration framework for managing and escalating activities in anticipation of or in response to significant occurrences, as well as, containing essential planning and exercise tools for those responsible for safety, security and resiliency. The out-of-the-box functionalities of TACCS™ operationalizes what other tools in the marketplace remain limited to. With TACCS™, you now have more than just pictures or simple data points on a map, you have actionable intelligence that can be utilized to act and respond in any environment. Target Markets currently utilizing TACCS™: Public Safety and Law Enforcement, Natural Disaster and Emergency Management (Flood, Fire, Water and Air Quality), Power, Water, Oil and Gas Utilities,

Venue, Retail and Supply Chain, Resort and Community Safety and Security, Transportation, Maritime, Military, Aviation and Special Security and Event Operations.

The TACCS™ platform is immediately available to end-users as SaaS (Software-as-a-Service) or on premises. Priority 5's expertise in operations' and emergency management in various industries created this innovative approach to addressing the complex environments of coordination, collaboration and communications from various agencies, partners and key stakeholders.

ABOUT PRIORITY 5

Priority 5 is a trusted provider of software solutions for situational awareness, consequence analysis and decision support. Its innovative software products aggregate and manage information in real-time to provide actionable intelligence in real-time.

Priority 5 has created robust software that includes a real-time common operating picture, interactive dashboards and analytical frameworks, which operate in a single, cohesive situational awareness platform. Its tools not only help the decision-maker sort through multiple information streams and changing circumstances to maintain real-time situational awareness, but enable multi-agency planning for response and recovery using a patented modeling and simulation technology. Priority 5's open architecture allows the entire response team, including field personnel, to actively participate in creating the ultimate and dynamic common operation picture.
